Ideagen? RISK MANAGEMENT REPORT

HAMMER

ТҮРЕ	Loader, Skidsteer Tracked - Seated
MAKE	Kubota
MODEL	SVL65-2
SERIAL NUMBER	17012
PLANT NUMBER	AHSH116
Report Number	AHH 20250217-1114
Date	17-Feb-2025
Created By	AHSH Service
Assessor	Mitchell Pennells
Assist. Assessor(s)	Mitchell Pennells
Completed By	AHSH Service
Owner	Australian Hammer Supplies Hire Pty Ltd
Assessment Purpose	Hire
State	NSW

TABLE OF CONTENTS

SECTION 1	IMPORTANT INFORMATION Contains information outlining the scope and any limitations applicable to this Risk Management Report
SECTION 2	MACHINE DETAILS Contains standard machine specifications and details of any extras fitted
SECTION 3	RISK ANALYSIS, RISK EVALUATION & RISK TREATMENT Contains details of the technique used to calculate risk ratings, time frame and risk treatments. Please refer to this information when reviewing and interpreting the information in section 4 & 5
SECTION 4	RISK TREATMENTS REQUIRED Contains detailed information regarding the risk treatments to be implemented including hazard, risk rating, time frame, relevant standards & legislative references
SECTION 5	RISK TREATMENTS IN PLACE Contains detailed information regarding the risk treatments in place including hazard, risk rating, relevant standards & legislative references
SECTION 6	IMAGES AND NOTES Contains images & any relevant information entered by the assessor

Serial Number Assessed By Date

SECTION 1 IMPORTANT INFORMATION

This report generated by Plant Assessor™ © Online Safety Systems on Monday, 17 Feb 2025 12:40 PM

This report pertains to this item of plant as it appeared on the day of inspection.

It is the responsibility of the hirer to conform with the instructions and information contained within this report. Any change in condition of this item of plant should be reported to the hire company immediately.

Any information relating to the standard features have been supplied via the manufacturer and should be used as a guide only until verified.

For further information regarding this report contact Online Safety Systems on 1300 72 88 52

SECTION 3 RISK ANALYSIS / RISK EVALUATION

RI	RISK ANALYSIS					
		1. INSIGNIFICANT Dealt with by in house first aid	2. MINOR Treated by medical professionals, hospital out patients	3. MODERATE Significant non permanent injury overnight hospital stay	4. MAJOR Extensive permanent injury eg. Loss of fingers, extended hospital stay	5. CATASTROPHIC Death, permanent disabling injury eg. Loss of hand, quadriplegia
	A. Almost certain to occur in most circumstances	MEDIUM 8	HIGH 16	HIGH 18	CRITICAL 23	CRITICAL 25
Ļ	B. Likely to occur frequently	MEDIUM 7	MEDIUM 10	HIGH 17	HIGH 20	CRITICAL 24
	C. Possibly and likely to occur at sometime	LOW 3	MEDIUM 9	MEDIUM 12	HIGH 19	HIGH 22
	D. Unlikely to occur but could happen	LOW 2	LOW 5	MEDIUM 11	MEDIUM 14	HIGH 21
	E. May occur but only in rare circumstances	LOW 1	LOW 4	LOW 6	MEDIUM 13	MEDIUM 15

NUTION	CRITICAL Act immediately to mitigate risk. Implement risk treatment(s) in accordance with the risk treatment table below.	
RISK EVA	HIGH Act immediately to mitigate risk. Implement risk treatment(s) in accordance with the risk treatment table below. If the appropriate risk treatments are not immediately accessible establish interim risk treatment strategies. Permanent risk treatments must be implemented within one week.	
MEDIUM Take reasonable steps to mitigate and monitor the risk. Implement risk treatment(s) in accordance with the treatment table below. Permanent risk treatments must be implemented within one month.		Take reasonable steps to mitigate and monitor the risk. Implement risk treatment(s) in accordance with the risk treatment table below. Permanent risk treatments must be implemented within one month.
LOW Take reasonable steps to mitigate and monitor the risk. Implement risk treatment(s) in accordance with th risk treatment table below. Permanent risk treatments must be implemented within three months.		Take reasonable steps to mitigate and monitor the risk. Implement risk treatment(s) in accordance with the risk treatments must be implemented within three months.

ATME

TREATMENT	Selecting the most appropriate risk treatment option involves balancing the costs and efforts of implementation against the benefits derived, with regard to legal, regulatory and other requirements. (source AS/NZS ISO 31000:2018)					
REAT	Eliminate	Eliminate the risk source.				
RISK T	Substitute	Provide an alternative that is capable of performing the same task which is safer.				
Ľ	Isolate	Isolate people from the hazard.				
	Engineering	Provide or construct a physical barrier or guard.				
	Administration	Develop policies, procedures, practices and guidelines in consultation with employees to mitigate the risk. Provide training, instruction and supervision about the risk source.				
	Personal protective	Provide personal protective equipment to protect the individual from the risk source.				

Serial Number Assessed By Date 17012 AHSH Service 17-Feb-2025

SECTION 4 RISK TREATMENTS REQUIRED

This section of the report pertains to hazards created by use of this item of plant which currently do not have risk treatments in place. The risk treatments recommended in this section have been developed based on relevant Australian Standards, health & safety legislation, the hierarchy of risk treatment in accordance with the guidelines set forth in AS/NZS ISO 31000 – Risk Management and various other sources. The recommended risk treatment measures must be developed, implemented and validated as effective prior to the operation, maintenance or testing of this item of plant. Treatments applied must be dated and initialled adjacent the recommendations. All operators must read and understand the entire contents of this section prior to operating this item of plant.

	HAZARD(S)	Prelim. Risk Rating	Residual Risk Rating	Time Frame	Due Date	Date Rectified	Initial
ATION		CRITICAL 24	MEDIUM 15	Immediate	17-Feb-25		
Only persons who are qualified, trained and experienced and/or hold the relevant certification/license can operate this item of p competent/licensed person available for operation of this item of plant then only persons who are supervised by a competent/license this item of plant.

SECTION 5 RISK TREATMENTS IN PLACE

This section of the report pertains to risk treatments currently in place on this item of plant. This section must be read in conjunction with the safety section of the manufacturers handbook. All operators must read and understand the entire contents of this section prior to operating this item of plant. These treatments or equivalent must remain in place at all times whilst this item of plant is in operation.

	HIGH 22	MEDIUM 15		
Risk Treatments in Place: Loader Prop The loader boom on this item of plant is fitted with a safety support and instruction label. These must be fully functional and serviceable at all times. The support must be used when accessing the area under the boom and bucket for maintenance or any other purpose.				
References: ISO20474-	1	1		
	HIGH 22	MEDIUM 15		
Risk Treatments in Place: Beacon				
This item of plant is fitted with a safety beacon. This beacon must meet the following criteria	at all times whilst this item of	plant fitted is in operation -		
 - Is visible up to 200m in all directions (allowing for intermittent obstruction from the plant structure whilst the plant is in operation) - Is fitted in the most appropriate location on machine to maximise visibility without risking continual damage 				
NOTE: more than one beacon may be fitted to meet these criteria.				
References: ISO20474-				
OPERATIONAL MALFUNCTION	HIGH 22	LOW 2		
Risk Treatments in Place: Plant Modification				
The plant is in original condition.

HAZARD(S)	Prelim. Risk Rating	Residual Risk Rating		
ENTRAPMENT	HIGH 21	MEDIUM 15		
Risk Treatments in Place: Two Operator Exits The operator cabin/work area on this item of plant has a minimum of two (2) possible exits. These must be functional and accessible at all times whenever the item of plant is manned, whether during operation or maintenance activities.				
References: AS5327				
	HIGH 21	MEDIUM 15		
Risk Treatments in Place: Emergency Exits The emergency exits for this item of plant meet the following requirements -				
 Clearly and legibly labelled Instructions for use are clear and legible and located adjacent the exit Any required tools required for use are available e.g. Emergency hammers 				
These exits must be legibly labelled and fully functional at all times whenever the item of pla activities.	nt is manned, whether during	operation or maintenance		
References: ISO31000	1	1		
POOR VISIBILITY, COLLISION	HIGH 21	MEDIUM 15		
Risk Treatments in Place: Windscreen Wipers The windscreen wipers and washers fitted to this item of plant must be fully functional at all References: AS/NZS4024.1201	times.			
CRUSHING	HIGH 21	LOW 5		
Risk Treatments in Place: FOPS General This item of plant is fitted with a Level I Falling Objects Protective Structure (FOPS). This structure is designed to protect the operator from small falling objects (e.g. bricks, small concrete blocks, hand tools) Before operating this item of plant a task based risk assessment must be conducted to determine the level of FOPS required. Level I - withstands 1,365 joules (e.g. 20kgs @ 7m drop, 70kgs @ 2m drop)				
 operations such as highway maintenance, landscaping and other construction site service Level II - withstands 11,600 joules (e.g. 200kgs @ 6m drop, 394kgs @ 3m drop) operations such as site clearing, overhead demolition or forestry 	S			
This task risk assessment must be undertaken before each operation, in particular when the item of plant is moved to a new location, even if it is within the same site.				
References: AS2294, ISO3449, ISO10262		1		
CRUSHING	HIGH 21	MEDIUM 15		
Risk Treatments in Place: 1T Controlled Lowering Device This item of plant is fitted with a controlled lowering device which is activated in the event of hydraulic failure. If this device is not fully functional then lifting of freely suspended loads in excess of 1T must not occur until this controlled lowering device is repaired. The requirements of AS 1418.8 must also be met prior to lifting freely suspended loads in excess of 1T. Freely suspended loads regardless of weight must never be lifted over any personnel.				
References: ISO8643, AS1418.8	ì	î.		
	HIGH 20	MEDIUM 14		
Risk Treatments in Place: Intuitive Controls The controls fitted to this item of plant are orientated so that the movement of the control is consistent with the action of the machine e.g. moving a control lever to the left results in the machine turning to the left. This design feature must be maintained at all times whilst this item of plant is in operation.
